

METHOD AND SYSTEM FOR CORRELATING JOB ACCOUNTING  
INFORMATION WITH SOFTWARE LICENSE INFORMATION

ABSTRACT OF THE DISCLOSURE

5 A job accounting and chargeback system for software  
products is comprised of a software license manager in  
the form of a software product use monitoring subsystem  
that handles requests for and grants rights to use  
software products, in such a manner that chargeback data  
is developed, which is then referenced to entities that  
10 are charged for the use of the software products. To  
better correlate the chargeback data with the use of  
software products, the chargeback data is referenced to  
the actual amount and type of use of software products  
being used, rather than on the use of computer  
15 facilities.
